CSA4312 – Internet Programming

Experiment - 4

Name: K. Dedeepya

Reg No: 192324252

Aim

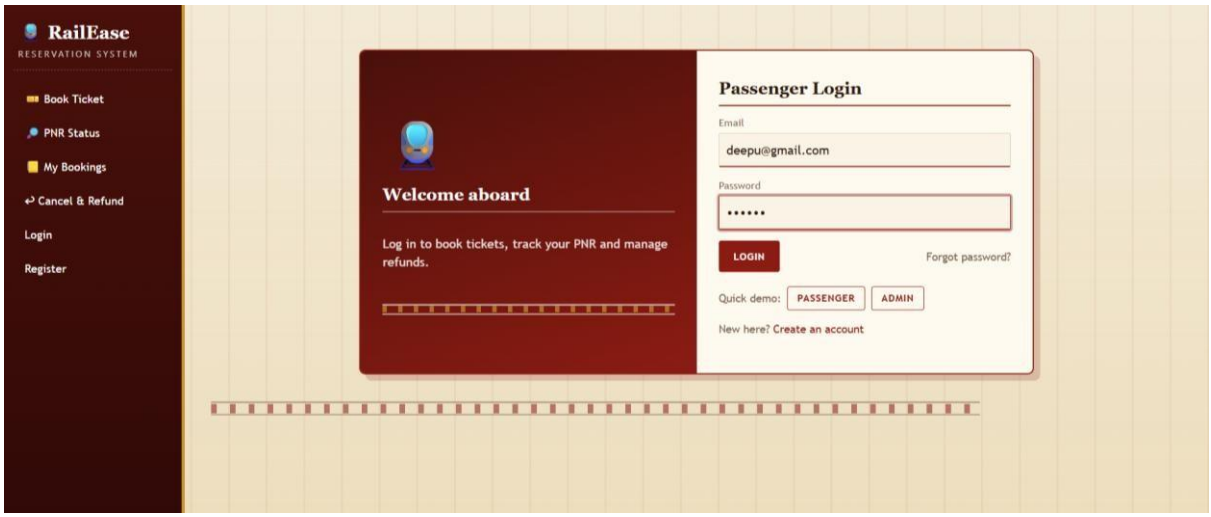

To develop an online Railway Reservation System for booking train tickets, checking seat availability, tracking PNR status, and cancelling tickets.

Procedure

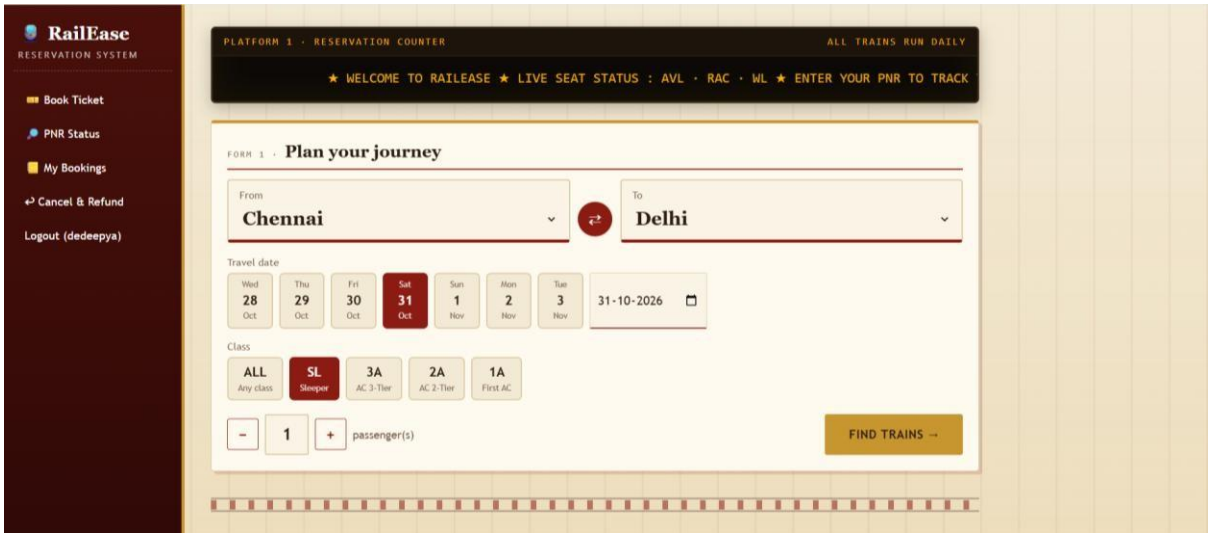

1. Create a registration and login page where passengers can securely access the railway reservation system using valid credentials.
2. Allow passengers to enter the source station, destination station, journey date, and preferred travel class to search for available trains.
3. Display the list of available trains with train numbers, departure and arrival times, ticket fares, travel classes, and seat availability.
4. Enable passengers to select a train and enter passenger information, including names, ages, and other required details, before confirming the reservation.
5. Calculate the ticket fare based on the selected train and class. Allow passengers to complete the payment through the available payment methods.
6. After successful payment, generate the reservation ticket with a unique PNR number. Allow passengers to view, download, or print their tickets.
7. Provide an option to check the booking status by entering the PNR number. Display whether the ticket is confirmed, under RAC, or on the waiting list.
8. Allow passengers to cancel their tickets by entering the PNR number. Calculate the refundable amount according to the cancellation rules and update the booking status.
9. Develop an admin panel to manage train details, schedules, fares, seat availability, passenger accounts, payment records, cancellations, and refund details.
10. Test the system to ensure that registration, login, train searching, seat selection, ticket booking, payment processing, PNR checking, and cancellation work correctly on desktop and mobile devices.
