CSA4312 – Internet Programming

Experiment - 1

Name: K. Dedeepya

Reg No:192324252

1.Aim

To design and develop a responsive Library Management System website using HTML, CSS, and JavaScript to manage books, library users, book search, issue and return operations.

Algorithm

1. Start the program and create the basic structure of the Library Management System using HTML.

2. Design an attractive and user-friendly interface using CSS with a navigation bar, search bar, book cards, and buttons.

3. Add book details such as book ID, title, author, category, and availability status to the website.

4. Implement a search feature using JavaScript to allow users to find books by entering the title, author name, or category. Display the matching books along with their details and availability.

5. Provide options for issuing and returning books.

6. When a user issues a book, check its availability and update its status to unavailable. When the book is returned, change its status back to available.

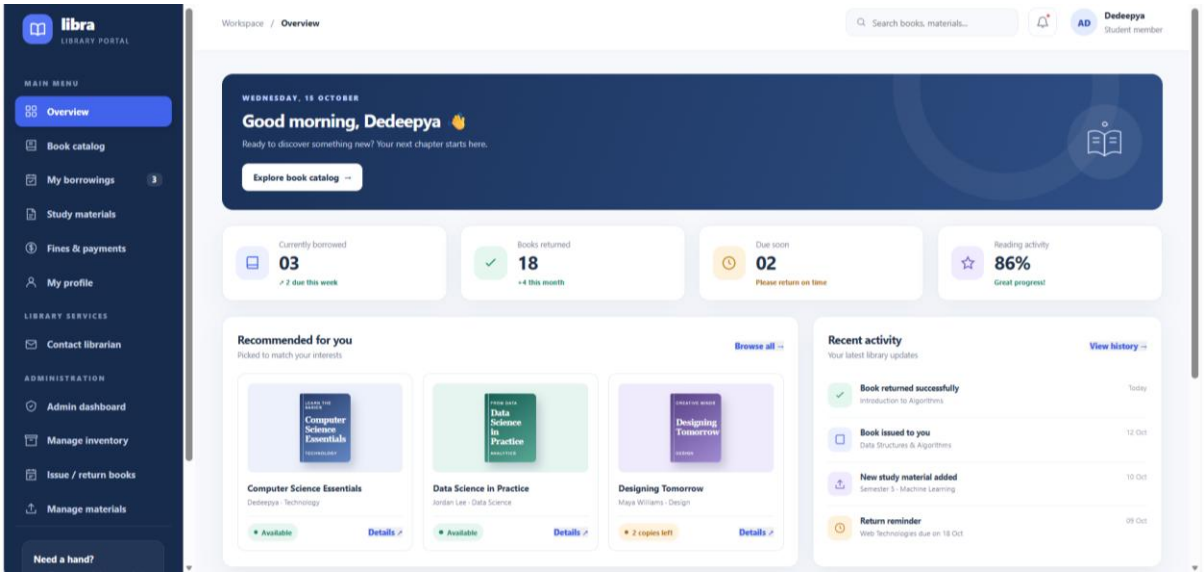

7. Create additional sections to display library information, opening hours, contact details, and library rules.

8. Test the website to ensure that the search, book issue and return operations, navigation, and other features work correctly.

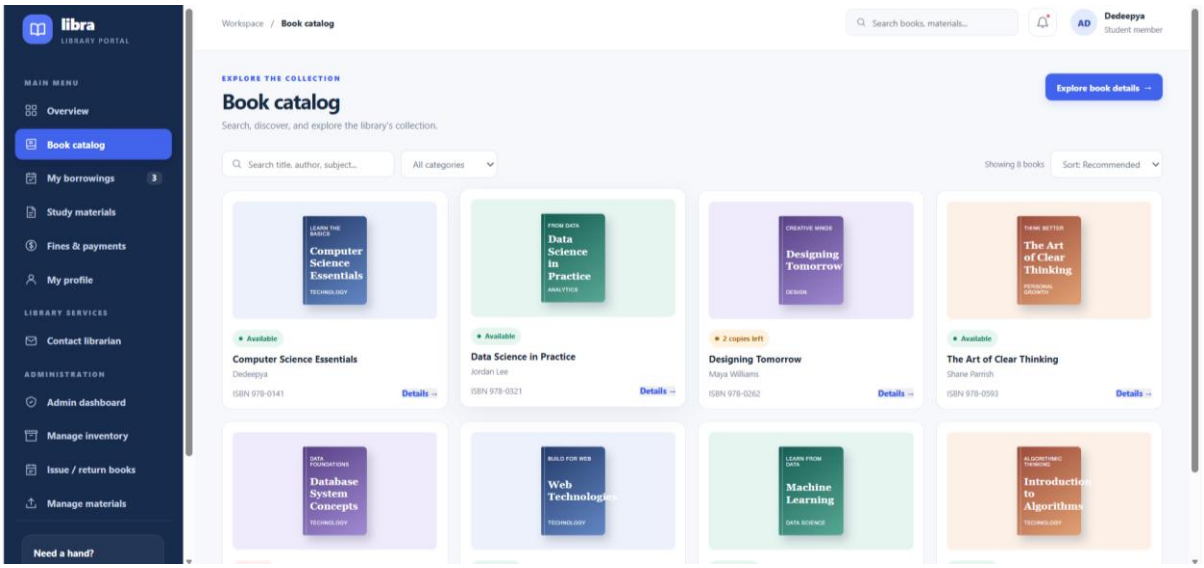

9. Stop the program after verifying that the Library Management System functions properly.

Output

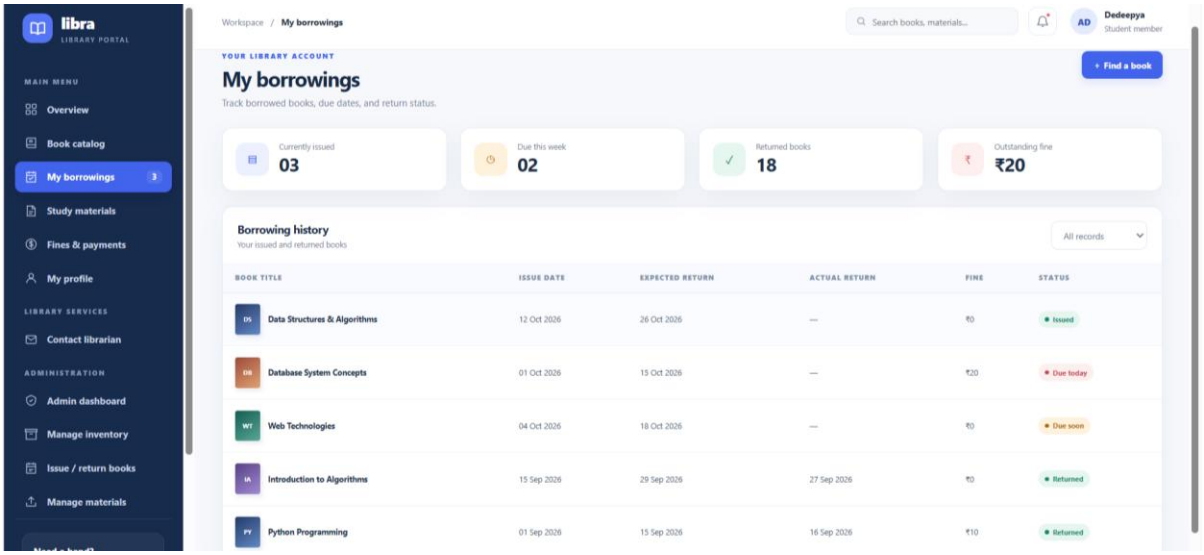

1.Home Screen

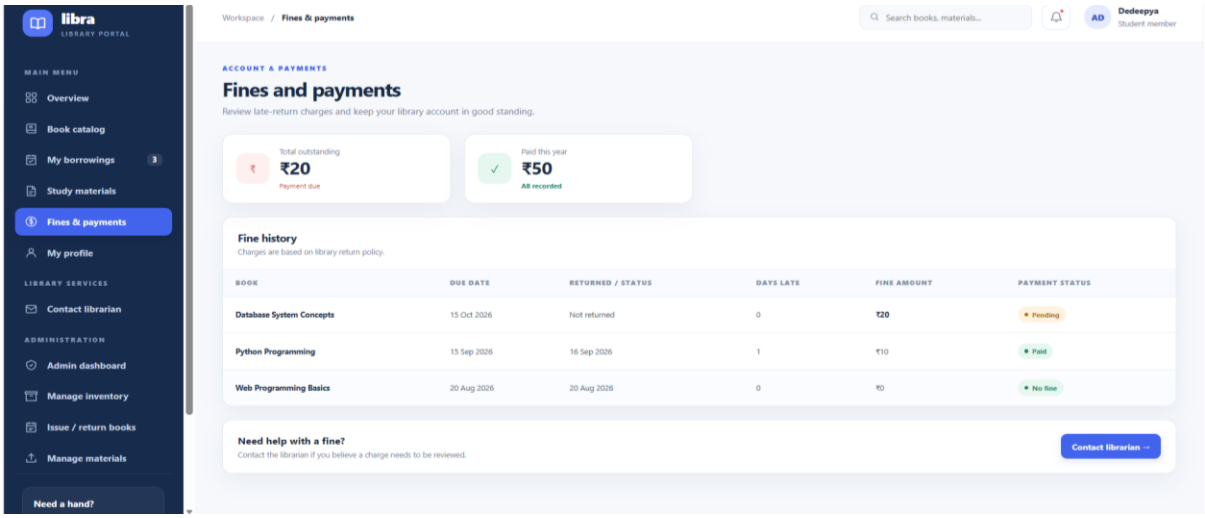

2. Book Catalog

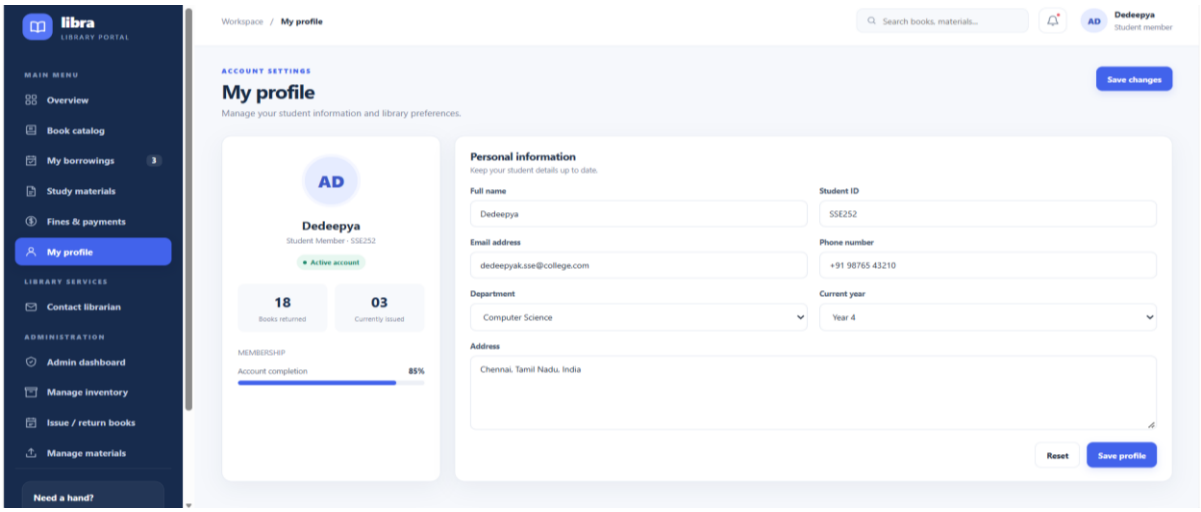

3.Book Borrowing

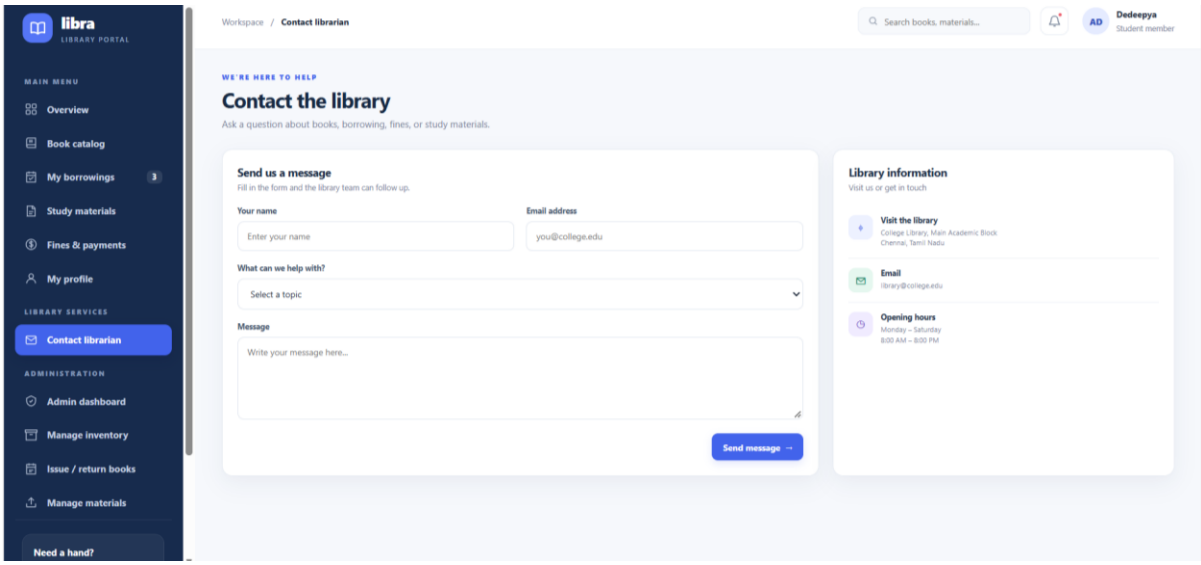

4.Fines & Payments

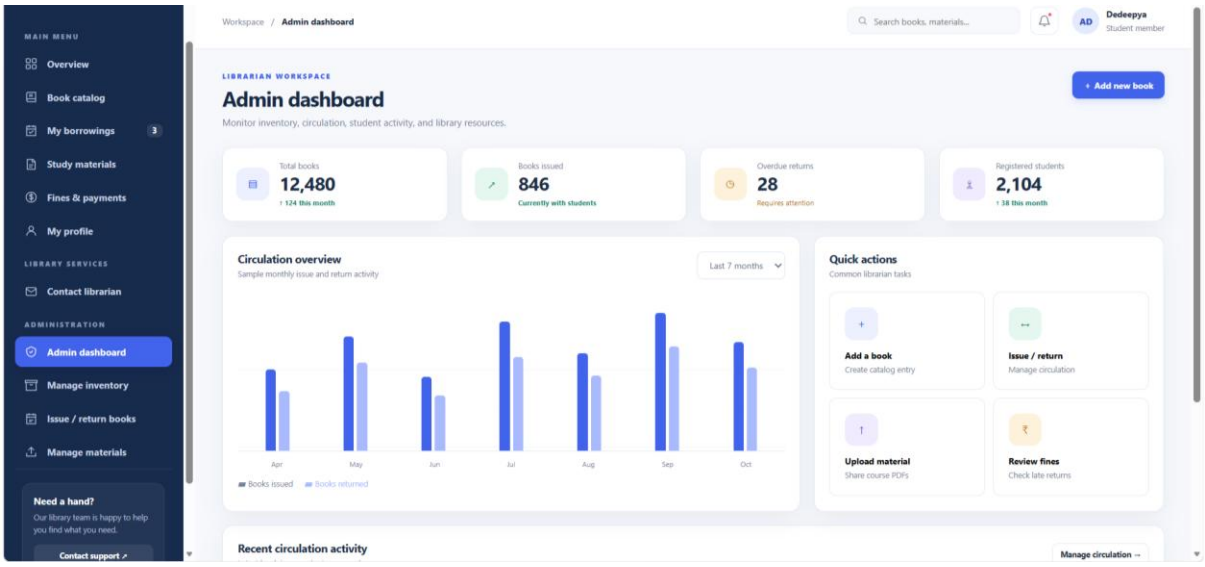

5.Profile page

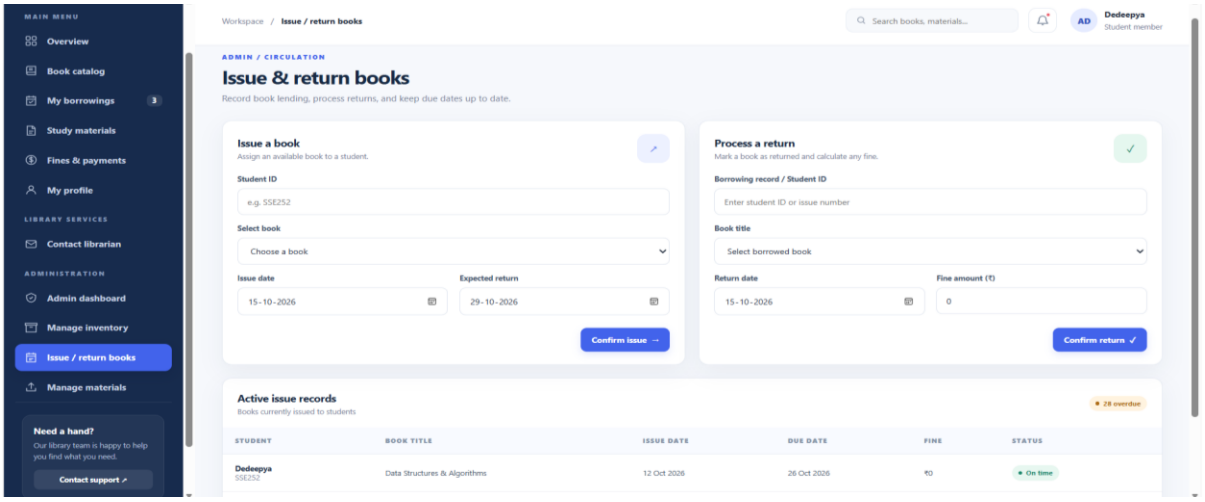

6.Library Services

7.Admin Dashboard

8.Issue & return Book

9.Manage Study Materials
