CSA4312 – Internet Programming

Experiment - 3

Name: K. Dedeepya

Reg No:192324252

1. Aim

To develop an Online Bus Ticket Booking System that allows users to register, search for buses, book and cancel tickets, while administrators manage bus details, schedules, users, and reports.

2. Procedure

1.Create a responsive website with a home page, bus details, login, registration, and booking sections using HTML and CSS.

2.Provide registration and login forms for users, with options to authenticate, change passwords, and recover forgotten passwords.

3. Allow users to search for buses by route, date, and time, view available seats, select a bus category such as Volvo or sleeper coach, and enter passenger details to book tickets.

4.Develop an admin panel to add or update bus details, including bus type, image, description, route, schedule, and seat availability.

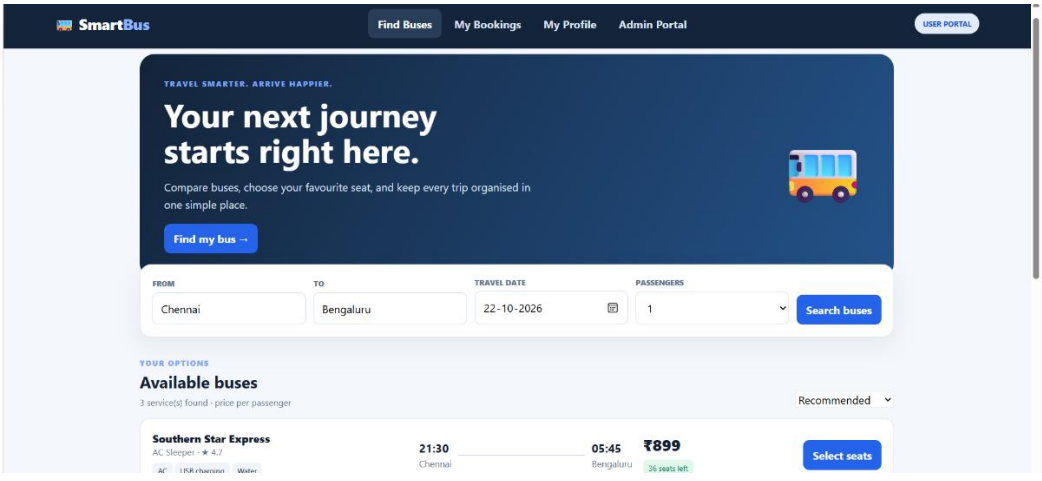

5.Allow users to cancel their booked tickets and view their booking history through their personal dashboard.

6.Provide an option for users to post comments and feedback about a particular bus.

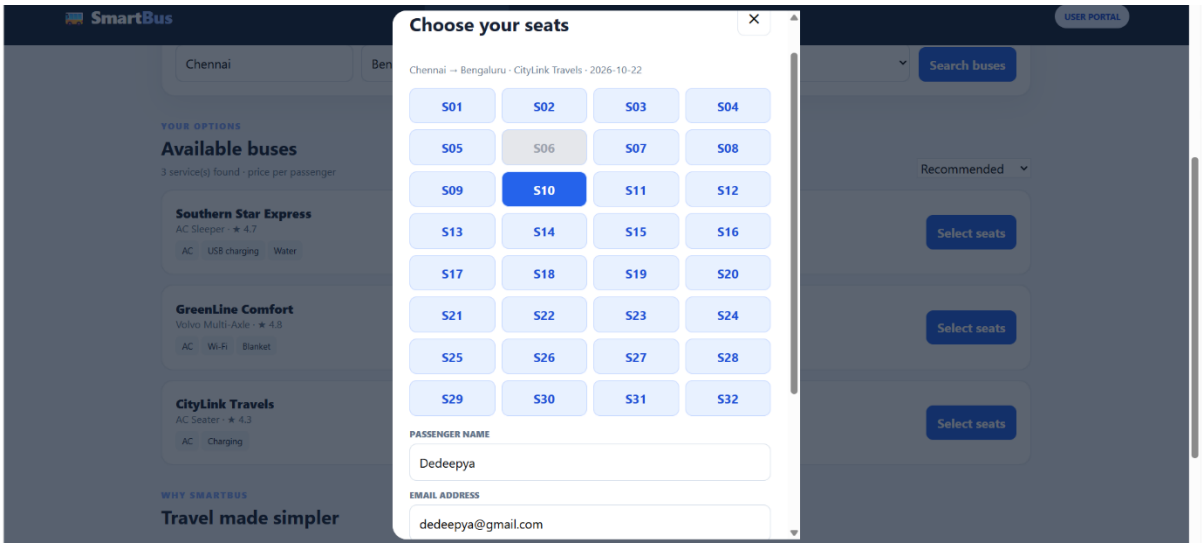

7.Enable administrators to manage registered users, bus categories, news, and other system information.

8.Generate reports related to bookings and bus information. Test registration, login, booking, cancellation, and admin functions to ensure the website works correctly.
